

**Safe'n'Sec®**

## **Host-based intrusion prevention system**

**Product:** Safe'n'Sec® Personal 2.0 + Antivirus

**Date:** 26/03/2006

Safe'n'Sec® Personal 2.0 + Antivirus is new generation of home PCs protection systems against various types of IT security threats such as viruses, worms, Trojans, spyware modules etc. The program detects and blocks the malicious activity on the operation system level. Intercepting system calls and analyzing system applications activity Safe'n'Sec® makes a decision about the malicious actions of application and blocks the attack in an initial stage.

Safe'n'Sec® Personal 2.0 + Antivirus was tested on a package of new malware consisting of 2700 samples including backdoors, Trojans, worms, spyware, viruses etc. 210 samples of those 2700 were not detected by Bitdefender (anti-virus engine within Safe'n'Sec® Personal 2.0 + Antivirus software). “As StarForce has got a product which uses Bitdefender engine along with Safe'n'Sec behavior analyzer it was extremely interesting to see if Safe'n'Sec protects against the malware which Bitdefender anti-virus failed to block”, says Andreas Clementi (AV Comparatives).

The test has shown only 6 of those 210 malware samples were not blocked by Safe'n'Sec® Personal 2.0 + Antivirus. “That means the software has shown 97% efficiency and that’s really very good results”, comments Andreas.

Safe'n'Sec® Personal 2.0 + Antivirus provides the inner PC environment security as well as secure Internet navigation. The program occupies minimum HDD (20 Mb) and uses no more than 2% processor resources as it doesn’t depend on signature updates. Being compatible and successfully supplementing other IT security software Safe'n'Sec® provides constant and reliable PC protection.

### **Safe'n'Sec® Personal is available in 3 versions**

Using behavior analysis *Safe'n'Sec® Personal* basic version blocks activity of the applications which are detected as malicious. *Safe'n'Sec Personal + Antivirus* is a complex solution including Safe'n'Sec proactive protection and antivirus data scanning module. Integrated antivirus scanner allows detecting and deleting files infected with already known viruses. *Safe'n'Sec®+Anti-Spyware* blocks previously unknown types of spyware modules and deletes already known spyware with the help of extended antispysware signature databases. All three versions are available for free download at [http://www.starforce.com/computer\\_security/protection.phtml?c=209](http://www.starforce.com/computer_security/protection.phtml?c=209) (trials).

### **About StarForce Technologies**

StarForce Technologies is an acknowledged expert in PC games, educational and business software protection. Since 2004 StarForce publishes IPS-solutions for PC and corporate networks protection from unauthorized excess.
