

## **Details about Discovered False Alarms**

## **Appendix to the Anti-Virus Comparative August 2011**

Language: English

August 2011

Last Revision: 27<sup>th</sup> September 2011

[www.av-comparatives.org](http://www.av-comparatives.org)

## Details about the discovered false alarms

With AV testing it is important to measure not only detection capabilities but also reliability - one of reliability aspects is certainly product's tendency to flag clean files as infected. No product is immune from false positives (FP's) but there are differences among them and the goal is to measure them. Nobody has all legitimate files that exist and so no "ultimate" test of FP's can be done. What can be done and is reasonable, is to create and use a set of clean files which is independent. If on such set one product has e.g. 50 FP's and another only 10, it is likely that the first product is more prone to FP's than the other. It doesn't mean the product with 10 FP's doesn't have more than 10 FP's globally, but important is the relative number.

All listed false alarms were reported and sent to the Anti-Virus vendors for verification and should now be already fixed. False alarms caused by unencrypted data blocks in Anti-Virus related files were not counted. If a product had several false alarms belonging to the same software, it is counted here as only one false alarm. Cracks, keygens, etc. or other highly questionable tools, including FP's distributed primary by vendors (which may be in the several thousands) or other non independent sources are not counted here as False Positives. An experiment evaluating the FP occurrence on clean files distributed by vendors as malware inside malware collections will be done in future.

In order to give more information to the users about the false alarms, we try to rate the prevalence of the false alarms. Files with valid digital signatures are considered more important. Due to that, a file with e.g. prevalence "level 1" and a valid digital signature gets upgraded to next level (e.g. prevalence "level 2").

The prevalence is given in 5 categories and labeled with the following colors: 

Level	Presumed number of affected users <sup>1</sup>	Comments
1 	Probably fewer than hundred users	Individual cases, old or rarely used files, unknown prevalence
2 	Probably several hundreds of users	Initial distribution of such files was probably higher, but current usage on actual systems is lower (despite its presence), that's why also well-known software may now affect / have only a prevalence of some hundreds or thousands of users.
3 	Probably several thousands of users	
4 	Probably several tens of thousands (or more) of users	Such cases are likely to be seen very less frequently in a false alarm test done at a specific time, as such files are usually either whitelisted or would be noticed and fixed very fast. We do not even give an own category for cases which affect several millions of users.
5 	Probably several hundred of thousands (or more) of users	

Most false alarms will probably most of the times fall into the first two levels. In our opinion Anti-Virus products should not have false alarms on any sort of clean files despite how many users are affected by them. While some AV vendors may play down the risk of false alarms and play up the risk of malware, we are not going to rate products based on what the supposed prevalence of false alarms is. We already allow a certain amount (15) of false alarms inside our clean set before we start penalizing scores and in our opinion products which produce a higher amount of false alarms are also more likely to produce false alarms on more prevalent files (or in other sets of clean files). The prevalence data we give about clean files is just for informational purpose. The listed prevalence can differ inside the report depending on which file / version the false alarm occurred.

<sup>1</sup> If all users would have used the Anti-Virus product causing the false alarm at that time.

Some products using third-party engines/signatures may have fewer or more false alarms than the licensed engine has by its own, e.g. due different internal settings implemented, the additional checks/engines/clouds/signatures, whitelist databases, time delay between the release of the original signatures and the availability of the signatures for third-party products, additional QA of signatures before release, etc.

False Positives (FPs) are an important measurement for AV quality. One FP report from a customer can result in large amount of engineering and support work to resolve the issue. Sometimes this can even lead to important data loss or system unavailability. Even “not significant” FPs (or FP’s on old applications) deserve mention and attention because FPs are likely to be a result of principled rule detections. It just happened that the FP was on an insignificant file. The FP possibility is probably still in the product and could FP again on a more significant file. Thus, they still deserve mention and still deserve penalty.

Below you will find the false alarms we observed in our independent set of clean files. Red entries highlight false alarms on files with valid digital signatures.

### McAfee

McAfee had zero false alarms over our set of clean files.

### Kaspersky

**False alarm found in some parts of**  
ZipInstaller package

**Detected as**  
Trojan-Downloader.Win32.Delf.aanf

**Supposed prevalence**  

Kaspersky had 1 false alarm.

### Microsoft

**False alarm found in some parts of**  
Fiman package

**Detected as**  
Trojan:Win32/KillMF

**Supposed prevalence**  

Security Essentials had 1 false alarm.

### Panda

**False alarm found in some parts of**  
No23recorder package

**Detected as**  
Malicious Packer

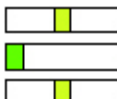

**Supposed prevalence**  

Panda had 1 false alarm.

### ESET

**False alarm found in some parts of**  
Appbooster package  
DiaShowPro package  
SecureEraser package

**Detected as**  
Win32/Packed.Themida  
Win32/Packed.GHFProtector.A  
NewHeur\_PE

**Supposed prevalence**  

ESET NOD32 had 3 false alarms.

### F-Secure

**False alarm found in some parts of**

- Azarus package
- Buchdruck package
- Intrapact package
- Skriptum package
- WinnerTw package
- WoodMahjongg package

**Detected as**

- Trojan.Generic.6304836
- Gen:Variant.Zbot.29
- Gen:Trojan.Heur.VP2.fm0@a4KofFgi
- Exploit.CVE-2011-0977.Gen
- Gen:Variant.Kazy.18603
- Gen:Variant.Kazy.14979

**Supposed prevalence**

F-Secure with default settings had 6 false alarms.

### Trend Micro

**False alarm found in some parts of**

- AudioConversion package
- Clara package
- Completi package
- Desert package
- MOD package
- OEconfig package

**Detected as**

- Mal\_Xed-22
- TROJ\_BUZUS.AVB
- TROJ\_GEN.R26C3HE
- TROJ\_GEN.F35CZFG
- TROJ\_DROPFR.SMP
- TROJ\_GEN.R01C4LA

**Supposed prevalence**

Trend Micro had 6 false alarms.

### BitDefender

**False alarm found in some parts of**

- Azarus package
- Buchdruck package
- Intrapact package
- Shellex package
- Skriptum package
- Virtualization package
- WinnerTw package
- WoodMahjongg package

**Detected as**

- Trojan.Generic.6304836
- Gen:Variant.Zbot.29
- Gen:Trojan.Heur.VP2.fm0@a4KofFgi
- Gen:Variant.Kazy.17493
- Exploit.CVE-2011-0977.Gen
- Gen:Trojan.Heur.KT.4.bq8@aqlITyf
- Gen:Variant.Kazy.18603
- Gen:Variant.Kazy.14979

**Supposed prevalence**

Bitdefender had 8 false alarms.

### Avast

**False alarm found in some parts of**

- AbsoluteBlue package
- DateCalc package
- DB2EXE package
- Fiman package
- FTPcontrol package
- Joshua package
- Sardu package
- Schannel package
- ShellPicture package
- xComposer package

**Detected as**

- Win32:Malware-gen
- Win32:Trojan-gen
- Win32:Malware-gen
- Win32:Malware-gen
- Win32:Malware-gen
- Win32:Malware-gen
- Win32:Dropper-FRU
- Win32:Fasec
- Win32:Malware-gen
- Win32:SMorph

**Supposed prevalence**

Avast had 10 false alarms.

## AVIRA

### False alarm found in some parts of

ATARIGames package  
 DateCalc package  
 DB2EXE package  
 DeltaForce package  
 Deluserlex package  
 OEconfig package  
 OpenOffice package  
 PosterForge package  
 SilentMicro package  
 Updater package  
 Worms package

### Detected as

TR/Dropper.Gen  
 TR/Agent.1372160.BG  
 TR/Kazy.14156.1  
 BDS/DsBot.dgd.1  
 TR/Spy.36864.20  
 BDS/Hupigon.ljqv  
 TR/Dropper.Gen  
 TR/Agent.cada.22945  
 TR/Fontra.A.31  
 TR/Drop.Autoit.FU  
 TR/Dropper.Gen

### Supposed prevalence

AVIRA had 11 false alarms.

## G DATA

### False alarm found in some parts of

AbsoluteBlue package  
 Azarus package  
 Buchdruck package  
 DateCalc package  
 DB2EXE package  
 Fiman package  
 FTPcontrol package  
 Intrapact package  
 Joshua package  
 ShellPicture package  
 VirtualizationAgent package  
 WinnerTw package  
 WoodMahjongg package  
 xComposer package

### Detected as

Win32:Malware-gen  
 Trojan.Generic.6304836  
 Gen:Variant.Zbot.29  
 Win32:Trojan-gen  
 Win32:Malware-gen  
 Win32:Malware-gen  
 Win32:Malware-gen  
 Gen:Trojan.Heur.VP2.fm0@a4KoffGj  
 Win32:Malware-gen  
 Win32:Malware-gen  
 Gen:Trojan.Heur.KT.4.bq8@aqlITyf  
 Gen:Variant.Kazy.18603  
 Gen:Variant.Kazy.14979  
 Win32:SMorph

### Supposed prevalence

G DATA had 14 false alarms.

## Sophos

### False alarm found in some parts of

Anchor package  
 AVI4CC package  
 Btrix package  
 Datecalc package  
 Deluserlex package  
 Ewido package  
 Lantern package  
 OEconfig package  
 000 package  
 OpenOffice package  
 PEexplorer package  
 Profe package  
 Starter package  
 Unhackme package

### Detected as

Mal/Generic-L  
 Mal/BredoZp-B

 Mal/Generic-L  
 Mal/Generic-L  
 Mal/Generic-L  
 Mal/Generic-L  
 Mal/BredoZp-B  
 Mal/EncPk-AAK  
 Mal/FakeAV-JU  
 Mal/Generic-L  
 Troj/Agent-SCQ  
 Mal/Generic-L

### Supposed prevalence

Updater package	Mal/Generic-L	
Zipnall package	Mal/BHO-BF	

Sophos had at least 16 false alarms with default settings. Due to issues with the cloud technology of Sophos and Webroot, it is unknown if there would have been more FPs if the cloud connection would have been worked properly. Their results are listed out of competition.

### Webroot

False alarm found in some parts of	Detected as	Supposed prevalence
Anchor package	Mal/Generic-L	
Btrix package	Mal/Generic-L	
DateCalc package	Mal/Generic-L	
Deluserlex package	Mal/Generic-L	
Ewido package	Mal/Generic-L	
Lantern package	Mal/Generic-L	
Maulwurfsmover package	Mal/Packer	
OEconfig package	Mal/Generic-L	
000 package	Mal/BredoZp-B	
OpenOffice package	Mal/EncPk-AAK
